

Important information from SaskPower

May 3, 2024

Dear Municipality:

Smart meters are one of the building blocks of a modern power grid and we're pleased to be bringing them to everyone in Saskatchewan. We're writing to let you know we're planning to begin installing smart meters for residential customers in your area in the coming weeks.

We'll install the smart meters at no additional charge for the meters or installation.

Over the past few years, we have successfully installed more than **85,000** smart meters across the province. These new meters have been rigorously tested and are safe for use in Saskatchewan. They meet new specifications that have been developed for our province and go above and beyond North American industry standard. We are pleased to report that there have been no issues with any of the smart meters we've installed to date.

We understand that you and your community members may have questions. We've attached some information to help answer those questions and understand the benefits of smart meters.

Benefits include:

- No more estimated bills – with smart readers, you'll pay for exactly how much power you use. And manual reads are no longer necessary.
- More information about your power use that will help conserve power and save money
- Shorter outages – smart meters will help us pinpoint the source of an outage and get power restored faster.

If you would like to receive printed materials to share and display in your communities, please **call us toll-free at 1-855-877-0975 to let us know.**

You can find more information at saskpower.com/smartmeters or **1-855-877-0975.**

Thank you,

Kevin Lalonde
Director, Distribution Construction & Project Delivery
